

## **Abraxis CAAS Cyanotoxins Training Testimonials**

“

Thank you for all your help yesterday. I didn't plan on so many people wanting to learn about the analysis, and appreciate your patience with us all, but it did seem to be very helpful for other parts of the agency and for our public health folks. I debated whether or not to spend the money on the training, but thought that it would help us move ahead faster on this project -boy was that was the right decision. We are much farther ahead in the analysis than I expected we would be, we have a better understanding of what we need to do, the program people have a better understanding of the lab issues, we have learned a bit about the program problems, and we have an intern who has learned about how all that academic information gets applied in the real world. Not too bad for a day's work. Thank you for being so knowledgeable, organized, and focused.”

“

I've ordered instruments and done method development from some of the world's biggest manufacturers and none of them have their ducks in a row as much as you all do.”

“

Thank you for instructing us on analysis on the Abraxis CAAS instrument. I learned a lot from you and am impressed by the instrument's performance and ease of use with the Abraxis methods and kits. I am also impressed by your company's commitment to insure successful use of the system and kits and to providing a means to detect environmental toxins.”
